

New Monitoring Technologies Support Science-Based  
Management Decisions in the Coastal Zone

Rob Magnien  
Maryland Department of Natural Resources

12:30-1:30, Thursday, May 22, 2003  
SSMC4, room #13153

This talk will explore new monitoring technologies and associated analyses that can be practically applied to coastal habitat management. Examples from issues related to nutrient enrichment, hypoxia, fish habitat, harmful algal blooms, habitat restoration, and predictive modeling will be presented.
